Domain Model changes

1. Navegability between entities "Message" and "Actor" changed. Now, the actors of the system won't have a list with all of his or her messages.
2. Added atribute "isSystem" to Message Box, so we can use it to define system boxes.
3. Navegability between entities "Message" and "Message Box" changed. Now, the navegability is unidirectional from Message Box to Message.
4. DateTimes changed to Dates.
5. Relationship between Administrator and Category deleted, as we don't need an intermediate table between Administrator and Category, as all administrators can administrate all categories.
6. Numeric attributes from CreditCard changed from int to Integer, so we can set them null.
7. Added unique constraint to attribute title from Warranty.
